# *A Non-Surgical Breakthrough Vascular Treatment*

## KNEE PAIN

## GAE

**Genicular Artery Embolization**

Knee pain from osteoarthritis.

## HIP PAIN

## TAME

**Transcatheter Arterial Micro-Embolization**

Chronic hip pain that limits walking, standing, and sleep.

## SHOULDER PAIN

## TAME

**Transcatheter Arterial Micro-Embolization**

Frozen shoulder, rotator cuff, and arthritis pain.

## HAND PAIN

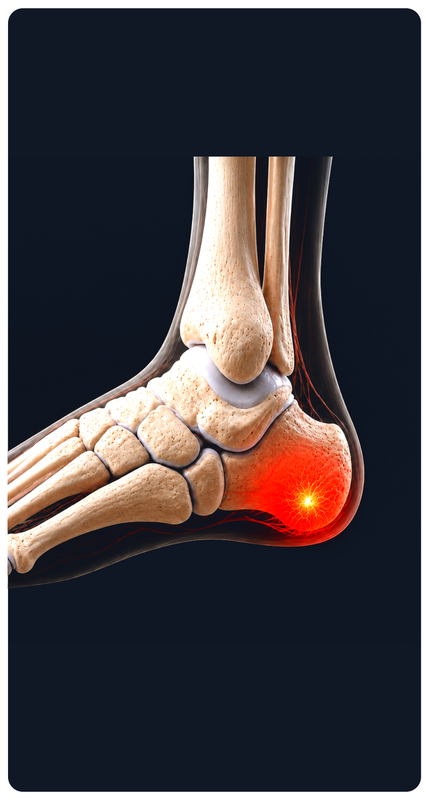

## TAME

**Transcatheter Arterial Micro-Embolization**

Thumb and finger arthritis that makes gripping and pinching painful.

## HEEL PAIN

## PFE

**Plantar Fascia Embolization**

Chronic plantar fasciitis and heel pain.

## HOW IT WORKS

**1 A pinhole, not an incision**

A small catheter is guided to the arteries feeding the painful area using advanced imaging. No general anesthesia, no stitches.

**2 Precisely placed particles**

Microscopic particles reduce the abnormal blood flow driving inflammation — while normal circulation to healthy tissue is preserved.

**3 Inflammation calms**

As the abnormal vessels quiet down, pain decreases and movement improves. Many patients notice improvement within the same day.

**Outpatient • Home the same day • No hospital stay • Most patients resume normal activity within days**

## ARE YOU A CANDIDATE?

- ✓ Moderate to severe pain lasting 3 months or longer
- ✓ Pain that disrupts sleep, work, or daily activity
- ✓ Want to avoid surgery — or aren't a candidate for it
- ✓ Tried therapy, medication, or injections without relief
- ✓ Diagnosed osteoarthritis, tendonitis, or plantar fasciitis
- ✓ Told there is “nothing more to do” but manage the pain

***Talk to us today about a non-surgical option to relieve pain and improve mobility.***
